

S. OPEN KNOWLEDGE Workshop

EUROPEAN HIGH-VALUE DATASETS FROM THE PUBLIC SECTOR

Marco Minghini

European Commission - Joint Research Centre (JRC)

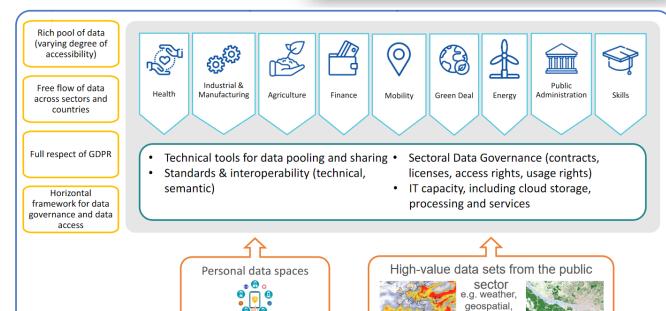

European strategy for data

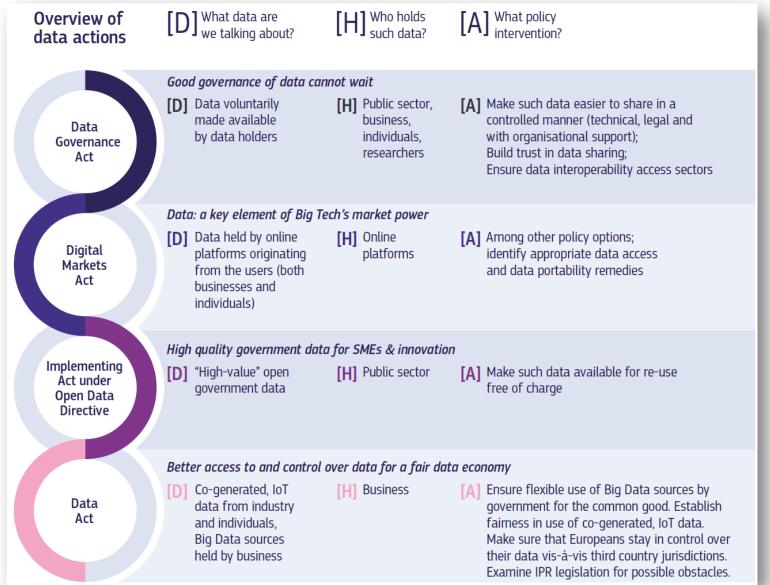

- Aims to create a European single market for data
- Highlights the problems to address
 - data availability, interoperability, quality
 - governance & infrastructures
 - skills & data literacy
 - cybersecurity
- Envisages the establishment of
 - a common European data space
 - sectoral data spaces

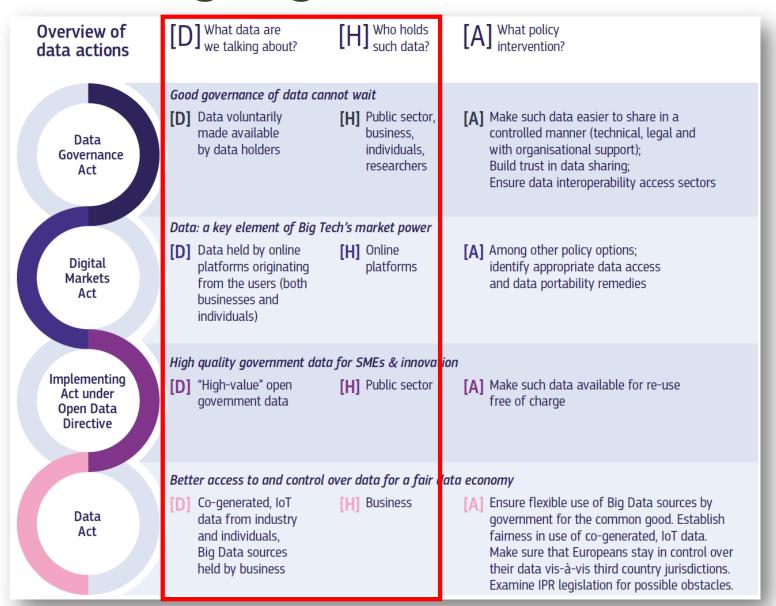

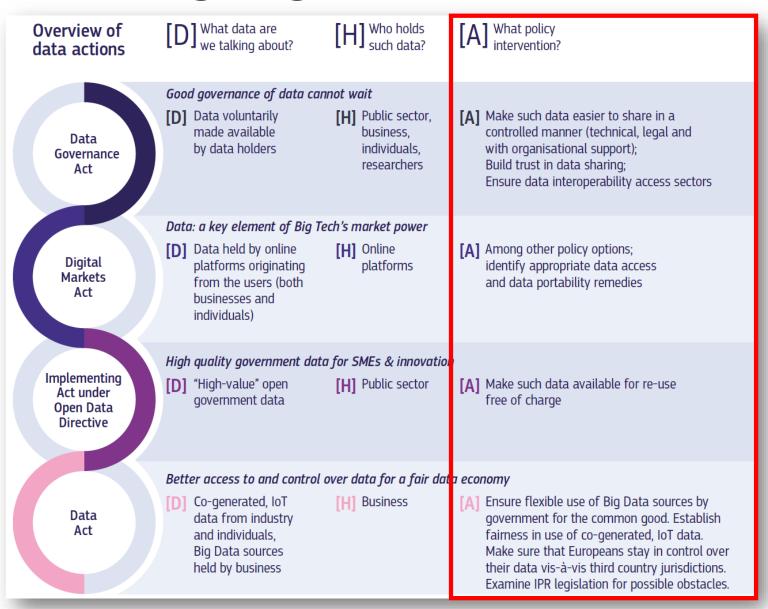

- Data in scope
 - from public sector,
 businesses, researchers
 and individuals

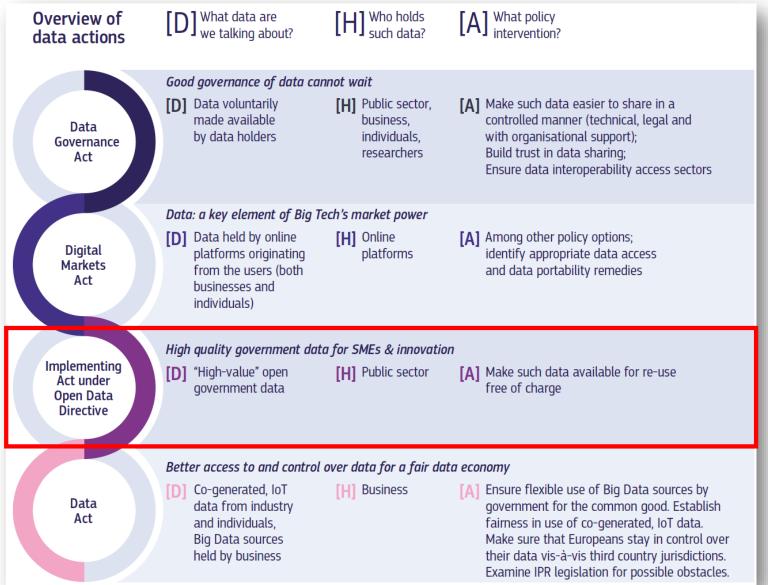

- Data in scope
 - from public sector,
 businesses, researchers
 and individuals
- Data sharing flows
 - G2B, B2G, C2G, etc.

- Data in scope
 - from public sector,
 businesses, researchers
 and individuals
- Data sharing flows
 - G2B, B2G, C2G, etc.
- Focus
 - Implementing Act on high-value datasets under the Open Data Directive

Open Data Directive

L 172/56	EN Official Journal of the European Union	26.6.2019		
DIRECTIVE (EU) 2019/1024 OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL				
of 20 June 2019				
on open data and the re-use of public sector information				
	(recast)			

http://data.europa.eu/eli/dir/2019/1024/oj

- Defines high-value datasets as public sector datasets, the re-use of which is associated with important socio-economic benefits
- Requires that high-value datasets are published
 - for free, under an open license
 - in machine-readable formats, via APIs and (when relevant) as bulk downloads
- establishes 6 categories of high-value datasets

Geospatial

Earth
observation and
environment

Meteorological

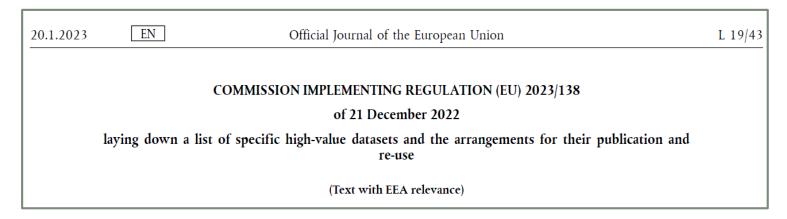

Statistics

Companies and company ownership

Mobility

Implementing Act

https://eur-lex.europa.eu/eli/reg_impl/2023/138/oj

- Defines the list of high-value datasets for each category & the requirements for their publication:
 - license: CC BY 4.0, CC0 or any equivalent or less restrictive license
 - key attributes
 - formats
 - metadata
 - (for geospatial datasets) granularity

List of high-value datasets (relevant to GEO)

Geospatial

INSPIRE data themes

- Administrative units
- Geographical names
- Addresses
- Buildings
- Cadastral parcels

Reference & Agricultural parcels (IACS)

Earth observation and environment

INSPIRE data themes

- Hydrography
- Protected sites
- Elevation
- Geology
- Land cover
- Orthoimagery
- Area management / restriction / regulation zones & Production and reporting units
- Bio-geographical regions
- Energy resources

- Environmental monitoring facilities
- Habitats and biotopes
- Land use
- Mineral resources
- Natural risk zones
- Oceanographic geographical features
- industrial facilities
- Sea regions
- Soil
- Species distribution

Meteorological

- Observations data measured by weather stations
- Climate data: validated observations
- Weather alerts
- Radar data
- Numerical weather prediction model data

Transport networks

INSPIRE data themes

Mobility

Companies and company ownership

Statistics

Benefits of high-value datasets

PRESS RELEASE | Publication 20 January 2023

Commission defines high-value datasets to be made available for re-use

Today, the Commission has published a list of high-value datasets that public sector bodies will have to make available for re-use, free of charge, within 16 months.

Certain public sector data, such as meteorological or air quality data are particularly interesting for creators of value-added services and applications and have **important benefits** for society, the environment and the economy – which is why they should be made available to the public.

Margrethe Vestager, Executive Vice-President for a Europe Fit for the Digital Age, said:

Making high-value datasets available will benefit both the economy and society, for example by helping to combat climate change, reducing urban air pollution and improving transport infrastructure. This is a practical step towards achieving a successful Digital Decade and building a more prosperous digital future.

Thierry Breton, Commissioner for Internal Market, said:

Data is a cornerstone of our EU industrial competitiveness. With the new list of high-value datasets, published today, we are unlocking a large amount of public data for the benefit of all. Start-ups and SMEs will be able to use this data to develop new products and innovative solutions that improve the lives of citizens in the EU and around the world.

Related topics

I. Overview of Benefits (total for all provisions) – Preferred Option (policy package 3)				
Description	Amount	Comments		
Direct benefits (range per annum 2024-2028)				
Economic impact	982 - 5734 million EUR	Incremental direct economic impact (GVA/GDP) is estimated as differential to baseline. Annual values for the years 2024 and 2028 are presented.		
Employment	10 - 61 thousand persons employed	Incremental employment impact for the preferred policy package. Total number of persons employed, estimated based on the employment coefficient/ratio to GVA for the EU27 ICT sector.		
Governmental revenues	452 - 2638 million EUR	According to the definition of Eurostat, the governmental revenue is the sum market output, of taxes, net social contributions, sales, other current revenues and capital transfer revenues. Combining these categories of governmental revenue, a weighted coefficient of EU27 by GDP is obtained. Following the calculations of Eurostat, this coefficient has and approximately value of 46% of GDP for the EU27. Ratio is applied to the direct economic impact. Hence it should be noted, that the indicator presented reflects the statistical revenues for governments in general, induced by the stimulation of GDP due to the policy interventions.		
Indirect benefits (range 2024-2028)				
Economic impact	2633 - 15225 million EUR	The analysis focuses on the indirect (forward) impact on downstream industries, which is considered to be the major indirect impact. To measure these impacts with regard to the PSI/HVD economic activity, results of the EU Data Monitoring have been analysed. As a result, for the indirect (forward) impact a magnitude between ca. 2.5 and 3.0 has been identified. To estimate the indirect (forward) economic impact, multipliers at the lower bound between 2.6 and 2.8 have been applied to the direct impacts.		
Employment	28 - 161 thousand persons employed			
Governmental revenues	1211 - 7004 million EUR

CC licenses at the Commission

A default choice since 2019

The Commission has adopted a new standard licence which will make it even easier for citizens and businesses to access and reuse the information the institution makes publicly available online.

For instance, access will be facilitated to videos and photos uploaded on online platforms, studies published in peer-reviewed journals, data and visualisations on the EU open data portal or documents published on the Europa website.

European Commission adopts CC BY and CC0 for sharing information

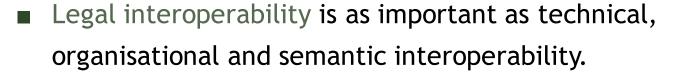

Last week the European Commission announced it has adopted CC BY 4.0 and CC0 to share published documents, including photos, videos, reports, peer-reviewed studies, and data. The Commission joins other public institutions around the world that use standard, legally interoperable tools like Creative Commons licenses and public domain tools to share a wide range of content they produce. The decision to use CC aims to increase the legal interoperability and ease of reuse of its own materials.

In addition to the use of CC BY, the Commission will also adopt the CCO Public Domain Dedication to publish works directly in the global public domain, particularly for "raw data resulting from instrument readings, bibliographic data and other metadata."

- In most data ecosystems (e.g. the European data spaces), the aim would not be to have all data being open:
 - public sector data whose access would affect public national security/defence, private sector data, personal data, etc.
- It is not enough that datasets are open, if their licenses are not compatible custom licenses should be avoided!
- Legal interventions may help use open data licenses.
- What is ultimately needed is a culture of openness.
